Thanks to their commitment, our products and services are taking giant steps forward. You will also find this dedication to improvement in our raft factory which was moved to a better and larger facility last November.

Sometimes we get so wrapped up in our own projects that we forget that free-flowing rivers are critical to the activities we all love so much. The order blank in this catalog includes an opportunity to add a dollar to your order and send it to either American Rivers or Idaho Rivers United. NRS will match your dollar and forward the funds for river conservation. Please consider sending additional funds in a check made out to either conservation organization.

## NRS HD Straps

Since we introduced HD straps to river runners almost 20 years ago, NRS Straps have been used for virtually every hold-down application. They've restrained 1300 lb. longhorn steers and of course secured thousands of raft frames. You can never have too many straps and ours are offered in eight different lengths for your convenience. NRS uses 1" polypro webbing that is custom made to a 1100lb. tensile strength. Each strap's length is woven into the webbing so they are easy to identify. The straps are sewn using a military spec box tack around a heavy duty 1" cam buckle, the strongest on the market.

### Cataract Oarshafts and Blades

The Cataract "SGG" is designed to flex like wood but rebound like graphite composites. The "SGG" effectively translates muscle power into stroke power giving you the ultimate in oar responsiveness. The "SGX" model is ideal for the person who wants a stiffer, lighter, longer oar. 50% stiffer than the "SGG". The removable Cataract Blade is made of high-density structural polyurethane. The blade is cast in a mold around a core of lightweight composite tubing to obtain a finished blade that is very light, strong, and bouyant. Blade is interchangeable with Carlisle blades.

ON THE MOVE

NRS continually strives to bring our customers high quality products at reasonable prices. A few years ago we opened our own raft factory in order to have hands-on control over production. This has resulted in our ability to produce some of the finest boats available today. Last November we moved into a new factory with better facilities for producing our 1995 models featuring some entirely new designs as well as the finest quality controls and materials. Today we are proud of what our associates in the Tecate factory have accomplished with their determination to produce world-class rafts and their dedication to continuous improvement in design and manufacturing.
