ULTRA JOHN

ULTRA JANE

OCENA® natural-rubber foam is made from responsibly sourced natural rubber, recycled materials, and more sustainable chemistry, offering an alternative to traditional petroleum-based neoprene.

SUSTAINABLE

Made from the sap of rubber trees that can be harvested for 30+ years.

CARBON NEUTRAL

Rubber trees absorb CO_2 as they grow, helping make OCENA a carbon-neutral material under ISO 14067.

BIO-BASED CONTENT

USDA-certified at 82% bio-based content, OCENA is the highest bio-based foam material for watersports apparel.

HYPOALLERGENIC

Up to 99% of latex allergy-causing impurities are removed during production, making OCENA rubber hypoallergenic.

RECYCLED OYSTER SHELLS

OCENA repurposes oyster-shell waste as a bio-based calcium carbonate, reducing reliance on conventional mineral extraction.

WATER-BASED ADHESIVE

Water-based adhesive replaces solvent-based glue in OCENA lamination, reducing volatile organic compounds (VOCs) during production.
